Reasons for Allowance

Claims 1-23 allowed.

As to claims 1-8 and 13-20, the prior of record, taken alone or in combination, fails to disclose or render obvious an apparatus for non-contact three-dimensional measurement of bodies consisting of a turntable to receive a body and an optical triangulation sensor wherein said body is located on the turntable in a system of coordinates determined, one the one hand, by at least two parallel lines or body edges with a known spacing and angles of the turntable and, one the other hand, by at least two measuring points at known distances from a center and known displacement of the triangulation sensor between these measuring points, in combination with the rest of the limitations of claims 1 and 13 respectively.

As to claims 9-12 and 21-23, the prior of record, taken alone or in combination, fails to disclose or render obvious a method for non-contact three-dimensional measurement of bodies consisting of a turntable to receive a body and an optical triangulation sensor wherein at least two lines or body edges running parallel at a known distance are used to determine angles of turntable by rotating said lines and subsequently capturing them in the measuring spot of said triangulation sensor in a first and second position by the known dislocation, said angles being used to calculate the distance of said triangulation sensor from the center of said turntable and to further calculate the coordinates x,y of said triangulation sensor (2) relative to the turntable center (M) as coordinates of origin, in combination with the rest of the limitations of claims 9 and 21 respectively.
